

ADME NTP Study S0160 p,p'-Dichlorodiphenyl sulfone

The contract laboratory abbreviation for the test article is DDS.
Animals used were adult male Fischer 344 (F-344) rats.

CASRN 80-07-9

Start date: 1/2/1992
Report date: 12/6/1994

p,p'-Dichlorodiphenyl sulfone Studies Performed:

1. 10 mg/kg single intravenous administration with cumulative excretion and tissue distribution at 72 hours post dosing.
2. 10 mg/kg single oral gavage administration with cumulative excretion and tissue distribution at 72 hours post dosing.
3. 100 mg/kg single oral gavage administration with cumulative excretion and tissue distribution at 72 hours post dosing.
4. 1000 mg/kg single oral gavage administration with cumulative excretion and tissue distribution at 72 hours post dosing.
5. 10 mg/kg single intravenous administration with cumulative excretion and tissues analyzed at 0.5, 4, 8, 24, 72, 168 hours and at 21 days post dosing.
6. 1, 10, or 100 mg/kg/day repeat oral gavage administration for 7 days with cumulative excretion, tissue distribution, and disposition at 72 hours after administration of the last dose.
7. 10 mg/kg/day repeat oral gavage administration for 2 weeks with cumulative excretion and tissue distribution at 72 hours after administration of the last dose.
8. 10 mg/kg/day repeat oral gavage administration for 3 weeks with cumulative excretion and tissue distribution at 72 hours after administration of the last dose.
9. 10 mg/kg/day repeat oral gavage administration for 5 weeks with cumulative excretion and tissue distribution at 72 hours after administration of the last dose.

The 7-day repeat dose studies included a vehicle control (not shown). Animals were sacrificed on Day 9. The rats in the 2-, 3-, and 5-week repeat administration studies were dosed 5 days a week with animal sacrifice 72 hours after last dose. Metabolism studies are not shown.
