How to Use this Instructor Manual

It is important to read through all of the material in this guide to properly prepare and deliver the Disaster Supervisor Resiliency Training course. The activities and timing of this course are intended for a maximum of 25 participants. If the group is smaller, the activities and group discussions may take less time than indicated. If the group is larger than 25, it will be very difficult to conduct the participative activities that are at the core of the program.

Trainers are encouraged to adapt and modify how they deliver the course to meet the needs of the specific program, audience, and circumstances. For example, the time available and the number of participants are two factors that would impact how the course is delivered. However, the core content of the course should not be significantly altered.

NOTE: Copies of the forms, handouts, and materials may be downloaded or ordered via the NIEHS WTP website: http://tools.niehs.nih.gov/wetp/index.cfm?id=2528

Goal of the course and target audience

This is a four hour course entitled “Disaster Supervisor Resiliency Training”. The goal of this training program is to prepare supervisors of disaster workers and volunteers to be proactive in recognizing and responding to disaster worker stress and trauma, be aware of their own reactions, and provide leadership to increase individual and organizational resiliency.

Instructor Manual

This instructor manual is designed to assist you in successfully delivering the program. Recognizing that instructors have varying degrees of training experience and subject matter knowledge, this manual includes step by step instructions on course preparation and delivery.

The instructor notes include material in quotation marks that is intended to be directly communicated to participants. It is better to use your own words rather than reading the material. The instructor manual also uses

Ask which indicates that the instructor should ask the participants that question in quotations marks.

Note is information to assist the instructor.

Explain is information that should be communicated to the participants.

Transition is information to alert the instructor to what is coming next.
Adult Education Techniques

This course is based on proven adult education techniques including:

- group discussions with flip charts;
- small group activities with worksheets and report backs;
- individual worksheets; and
- optional case studies.

The participative approach encourages students to play an active role in learning. Participative training techniques are much more effective than lecturing. Most students zone out after 6 minutes of lecturing. By drawing on participant’s work experience you will engage them in learning and solving problems presented in the material.

Be a Facilitator

We encourage you to be an instructor who facilitates the course. Use the activities and questions included in the presentation to draw out students’ experiences related to stress and trauma in disaster work and help them fill in the missing pieces.

Your role is more as a discussion leader than as “expert”. This approach is more rewarding for participants and less of a burden on trainers.

Preparation

You should expect to study, review and prepare for this course for at least two hours per hour you will be teaching. There is a great deal of information in this course, including a robust set of instructor’s notes embedded in the PowerPoint. Those same notes have been placed side by side with copies of the PPT slides in this Instructor Manual. Additional resources and links have been added at the end of the manual that may be accessed if you want to further study the subject matter to prepare for the course.

Part of preparation is working with the host organization that is sponsoring the training to address training logistics. It is also very beneficial to have the course sponsor provide the names and contact information to any local resources and referral sources that may be used by the attendees. Additionally, any organizational specific program or procedures should be reviewed by a local organizational representative. Activity 6 offers an opportunity for you to list local resources. A template has been provided in Appendix 6 for you to complete if you do not have your own. In addition, participants have handouts with tips for resilience at the end of their manual.

The Pre-Training Checklist on page 11 provides a useful tool for instructors to make sure all these bases are covered.
Room Set-up

Due to the participative nature of this course it is important to set up the room in a manner that facilitates small group work. An example, would be round tables that seat 5 to 8 per table. If that isn’t possible, the instructor can direct people to orient their chairs so that they are facing one another. If the number of participants is relatively small, a U shape may be effective; where half the participants move inside the U to do group work.

PowerPoint (PPT) and Participant Manual

The PPT and Participant Manual are designed to be used together. They should not be used independently of each other.

The PPT presentation was designed to be visual and stimulating. It is advisable to review the slides several times to become familiar with them.

NOTE: You will not have access to the instructor’s notes when the PowerPoint is in slideshow mode. Therefore, you will need to decide in advance to:

- teach to the Instructor’s Manual that contains the same notes as the PPT and copies of the activity worksheets;
- print out the notes; (activity worksheets are NOT included)
- or memorize the material so that you do not need to refer to the notes.

The Participant Manual

Every student should be given a Participant Manual that includes all of the information that is in the PPT slides. They should refer to it as you go through the PPT slides and exercises. All of the activity worksheets are contained in the Participant Manual as well, and students should write directly onto them.

Encourage students to write answers in all of the worksheet spaces because it is a good way to learn the material. We have tried to make this easier by numbering each activity and listing the page number in the Participant Manual to be used. There is also a glossary at the end of the Participant Manual. Point that out to the students. Mention that the manual will serve as a reference they can use after the course. There are also links to websites, resources, and related materials in the back of the manual.
Activities and Small Group Discussions

This course contains 6 activities, of which many are small group activities. There is an icon on each PPT slide that coincides with activities in the Participant Manual.

As the facilitator you will need to help the class divide into an appropriate number of groups. For example, if there are 20 in the class, you could divide into four groups of five. You will also have to decide if the groups should be organized based on certain characteristics such as a) all from the same workplace; b) all in the same occupation; or c) a mix of experienced and novice workers.

Make sure the groups know which page of the Participant Manual to work on and how many minutes they have to do the task. It is also important to emphasize that they need to select one person to be the recorder/reporter for the report back. Ask if there are any questions before they begin. It is a good idea to walk around the room and observe the groups and make yourself available if they have questions. Make sure everyone is engaged and participating in the activity.

Keep in mind that some of the questions are open-ended and may have different responses. It is important to allow students to present their solutions. As long as they defend their solutions well, it may just be one of many correct ways of dealing with a problem. As the instructor, you want to clarify and emphasize the subject matter. Also, it is advisable that during your preparation to deliver the course, you complete each activity in the Participant Manual on your own, providing your own answers to the exercises. This will give you a better understanding of the course and give you at least one “correct” example. Keep the student manual that you completed as your own, as well as the instructor manual, and use them to record notes and improvements or your own methods for presenting the course.

In this Instructor Manual, there are answers provided to each question.

Sensitivity

Instructors should be aware that some of the activities and discussions may trigger a traumatic memory or strong emotional response among participants. It is normal for participants to express emotion when discussing these experiences. However, it is important that if and when a strong emotional response is encountered, that you address it with sensitivity and care. Listening and expressing your support are fundamental. Never discuss an individual's private issues publicly in a training program. If the person needs to be re-directed, you may have the class take a break so that you can speak privately to the individual and try to help them to obtain a referral, as needed. This type of interaction is not a common occurrence.
Use and Design of PPT Slides

1. Slides are an appropriate visual aid for the program. However, there are many times when having NO visual aid would better serve the presentation. To get the student’s attention away from the slide, you can darken the screen by hitting “B” for black, on your computer keyboard. Do this when you want the class to look and listen to you. Hit B again when you want to bring back the image. “W” works the same for a white screen.

2. The success of the presentation hangs on the students understanding the content. Ask questions of the group to affirm they understand what you are saying. For example, “Are there any questions about the meaning of resiliency?” or “Can you provide an example of a traumatic event?”

3. The slides projected during the presentation do not have as much text on them as the Manual does because too much text on slides is tedious for the learners.

4. Caution: Don’t face the screen and read your slides. The bulleted information on the slides should be supplementary to what you are saying. Refer to the Instructor Notes or Instructor Manual for detail. Use the slides to trigger your comments or to pace yourself. The audience can read. Remember that your slides are only there to support, not to replace your talk! If you read your slides, the audience will get bored, stop listening and not get your message.

5. Finally, the primary purpose of the slides is to help the audience understand the content, not to provide talking points for the speaker.

Allocated time

NIEHS WTP considers four hours to be the minimum time needed to effectively facilitate this course, including activities and report backs. If the class has a particular interest or gets a useful discussion going, adjust time as you see fit. If you have to adjust the time, you should prepare in advance so that you and the students are aware of the sections of the course that will be covered and omitted. NOTE: This Instructor Manual has a suggested amount of time in the heading bar for each section.
**Course delivery**

Work hard to get the students involved; this may be the only opportunity they have to learn about resiliency. If you find you are running short on time, you may have to do some of the following to manage the time:

- Eliminate one or more activities;
- Assign activities so everything is covered, but no item is duplicated among the groups. For example, if there are 15 questions and five participants per group, have each group member work on only 3 questions each;
- Shorten report back time by having each group only give one response and then ask the class if “anyone has anything to add.”; and
- Instead of doing small group, do the activity with the entire class.

If you have extra time, during the report back you can ask the other groups if they have any additional comments, suggestions, or ideas based on the report back.

**Training materials for course**

Preparing the materials and set-up of the room is essential to a successful program.

Cultural Awareness

Definition of Cultural Awareness

• Awareness of your own culture as a set of values, behaviors, attitudes, and practices, and the understanding that other cultures may be different from your own
• Respect for the beliefs, languages, and behaviors of others
• A quality that develops over time, usually involving increasing sensitivity and long-term commitment

Instructors should strive to understand and respect the cultures within the community that they are training. Make adjustments to the training based on cultural considerations. For example, cultural norms about talking about emotions or seeking professional help may vary in different cultures and some may be reluctant to discuss their feelings in the course.

The training program is based on an assumption of natural resilience and competence — most people will recover and move on with their lives, even without assistance. Therefore, we promote independence rather than dependence on other people, or other organizations, and assume competence in recovery.

Recognize the importance of culture, and respect diversity
Culture is one medium through which people develop resilience. Culture also provides validation and influences rehabilitation following a disaster.

Recognize the role of help-seeking, customs, traditions, and support networks:
• People turn to familiar sources for assistance, including family members, friends, community leaders, or religious organizations, before reaching out to government and private-sector service systems.
• Religious and cultural beliefs may influence perceptions of the causes of traumatic experiences.
• Reestablishing rituals in appropriate locations is another way to help survivors in the recovery process.
Pre-Training Checklist

Duplicate this form as needed.

Needs Assessment
Prior to the course, contact the organization(s) sponsoring the training to discuss the following:

☐ Disaster work experience
☐ Type of disaster
☐ Size and scope of disaster
☐ Population affected, including special populations and cultural factors

Program Specific Data

☐ Size of program—number of workers, volunteers, etc.
☐ Background and experience of trainees
☐ Current status of planned disaster work services
☐ Ask the program manager (or designee) to prepare to deliver a 10 to 15 minute presentation that provides an overview of the organization’s program for providing support services, if they have one, as well as a list of local resources and referrals

Course Logistics

☐ Number of participants
☐ Length of course
☐ Location of training facility
☐ Training room size and setup
☐ Audiovisual support—LCD, computer, flip charts
☐ Nametags, markers, etc.
☐ Copies of the Participant Manual and other materials

Other Items

☐ Review the training agenda and plan with the training contact.
☐ Discuss how the input generated through the training activities will be captured and transferred to their organization(s).

Post-Training

☐ Provide copies of evaluation forms to training contact and NIEHS WTP.
☐ Complete the Trainer’s Evaluation Form and submit to NIEHS WTP.

In an effort to continuously improve the Disaster Supervisor Resiliency Training Program, we are requesting that you evaluate the effectiveness of the training that you instructed. On this survey, you are asked to evaluate various aspects of the training. In addition, you are asked to provide a written response to certain questions. Please be **open** and **honest** in your responses.

To ensure your **privacy**, do not provide any personal identification on the rating form. Please let us know if you have any questions.

In this section, you are asked to rate the effectiveness of the Disaster Supervisor Resiliency training you presented. Using the rating scale below, please mark the circle that most closely reflects your answer to each statement.

1. **Strongly Disagree** 2. **Disagree** 3. **Somewhat Disagree** 4. **Neutral** 5. **Somewhat Agree** 6. **Agree** 7. **Strongly Agree**

Disaster Distress Hotline
Disaster Distress Helpline is a 24/7 helpline designed for those experiencing stress, anxiety and distressing reactions. This free helpline is staffed by trained counselors from a network of crisis call centers located across the United States, all of whom provide crisis counseling for those who are in emotional distress related to any natural or human-caused disaster, information on how to recognize distress and its effects on individuals and families, tips for healthy coping, and referrals to local crisis call centers for additional follow-up care & support.

Slide 1

“Welcome to the Disaster Supervisor Resiliency Training that is being provided to you by (name of organization). This program was developed by the National Institute of Environmental Health Sciences Worker Training program and we acknowledge their support.

In this program we will be working in small groups and also doing individual activities. You will be using the Supervisor Training Manual throughout the program. You will write directly into the manual and take it home with you. Everything that is on the PowerPoint slides is in the manual.

In the back of the manual is a glossary of terms and 4 factsheets that may be used or adapted by you and your organizations. We have set up a webpage so that you can easily access these materials for downloading and printing.

We will begin by reviewing the course agenda and objectives on page 5 of the manual.”

Slide 2

Review the course agenda.

**Explain:** “The goal of this training program is to prepare supervisors of disaster workers and volunteers to be proactive in recognizing and responding to disaster worker stress and trauma, be aware of their own reactions, and provide leadership to increase individual and organizational resiliency. We will be introducing new words and concepts. Addressing these issues a key to protecting disaster workers and volunteers health and safety.”

“This course is designed to be interactive. It is well established that training participants learn more when they actively participate through small group activities, examples, and other participative methods. These methods are used in this course so you can share your experience and knowledge and actively engage in the learning process.”

**Factsheet and Resources Web Address:** http://tools.niehs.nih.gov/wetp/index.cfm?id=2528
**Slide 3**

**Overall Learning Objectives**
- After completing this course, participants will be able to demonstrate an ability to:
  - Recognize signs and symptoms of disaster work related stress
  - Understand the unique role of the supervisor in balancing health, safety, resilience, and productivity
  - Build your own and your team's resilience by demonstrating stress reduction and supportive skills
  - Obtain support through your employer/organization and community resources
  - Provide leadership and support to the people you supervise

**Explain:** “This training program is designed so that supervisors will recognize disaster related stress in themselves and the people they are leading, learn how to obtain support, and build their own and their team’s resilience through stress reduction and coping strategies. Addressing these issues is key to protecting the health and safety of disaster workers and volunteers. When we leave today, we will have action plans for making improvements.”

“The term “Disaster Worker” in this program refers to a broad variety of people engaged in disaster response, recovery, and rebuilding. It includes people who are employed, volunteers, and home owners. Often disaster workers are also disaster survivors.”

“The term “supervisor” is used to define a variety of supervisors, managers, field coordinators, team leaders, and other personnel who are responsible for supervising work or voluntary teams doing disaster rescue, recovery, or rebuilding work.”
Chapter 1—Introduction

Slide 4

Explain: “Chapter 1 is the introduction.”

Ask: “Please introduce yourself and briefly tell us what you do”

Note: It is valuable to do introductions, but the approach may be modified depending on how many participants are in attendance and time constraints.

Slide 5

Review the slide.

Introduction: “We all know that disaster work can be exhausting, frustrating, and stressful. Some of the stressors include exposure to large scale destruction of homes, communities, and businesses. Often disasters cause injury and loss of life as well as displacement of people from their jobs and homes. When terrible things happen it is normal for people to react. However, preparing to recognize and confront disaster related stress can help workers avoid injury, illness, and help build strength and character.

Supervisors can play a key role by setting an example for the people they supervise and by assessing and responding to signs of stress and trauma among them.”

Transition: The next slide provides an overview of traumatic events.

Slide 6

Review the slide.

Explain: “Exposure to the day to day stressors in disaster response and recovery work can have similar effects as an exposure to a traumatic event.”

“Coping is ‘dealing successfully with a difficult problem or situation’. “

Transition: “We will discuss more thoroughly about traumatic events later in the training. We will now move into Activity 1 to get to know one another and begin to define resiliency.”
Activity 1: Turn to page 8 in the Participant Manual.

Note: Write the groups responses on a flip chart. After the groups present their input, review the definitions on the following slides.

Activity 1: Sharing your experience and thoughts about disaster work and resiliency.

Small Group Activity Method: Divide participants into small groups, select a member to record the responses and do the report back. Explain that participation may be maximized by allowing everyone to speak, going around the circle. Participants do not have to share if they are not comfortable.

Time for activity: 25 minutes (5–10 for group work and 15 for report back)

Objective: The goal of this activity is to share and discuss your experiences related to disaster work.

Task: Answer each of the questions:

What does the term “resiliency” mean?

Why should supervisors be concerned with resilience?

What are some of your experiences with disasters and/or mental health and resilience?

What are some reasons talking about stress and resilience are difficult?
Slide 8

Review the slide and compare to group responses.

**Definition of Resiliency**

The ability to become strong, healthy, or successful again after something bad happens.

It means bouncing back from difficult experiences.

---

Slide 9

Review the slide.

**Resiliency is not a trait that we inherit.**

It is a combination of:

- behaviors
- thoughts, and
- actions

...aimed at coping specifically for you.

**Ask:** "How does the image relate to resiliency?"

**Note:** The image shows a glass that is half full and half empty demonstrating that the same problem or issue can be looked at with a positive or negative outlook.

---

Slide 10

**Why should supervisors be concerned with resiliency?**

**Supervisors:**

- Play a KEY role in supporting workers.
- Can help encourage positive actions to increase resilience.
- Have access to resources.
- Have a responsibility for the well-being of their team.
- Are in a unique position to identify and assess problems, and assist workers.

**Ask:** “Why should supervisors be concerned with resilience?”

**Explain:** “It means moving forward.” “To live, not just exist”.

**Explain:**

- Supervisors are KEY in supporting resilience among workers.
- Supervisors have an important role in the workplace and can help encourage positive actions to increase resilience.
- Supervisors have access to resources that workers may not have
- Supervisors have a responsibility for the well-being of their team
- Supervisors are in a unique position to identify, assess, and assist health and safety, including stress and trauma

**Transition:** Supervisors are important in overseeing work and workers, and we know that stressful working conditions and stressed workers can impact a business.
Slide 11

Ask: “What are the impacts on business and organizations?”

Explain: “Research has found that worker stress increases costs to businesses, reduces productivity and can lead to turnover. Research has found that stress costs US Businesses $2,770 per employee!!

Additional costs are incurred by employers when employees leave and jobs are left unfilled, during onboarding, and through increased absenteeism, and increased use of sick leave.”

Slide 12

Explain: “One of the biggest obstacles to talking about resilience is the stigma of mental illness. This stigma often leads to a chain of events that make mental health even more difficult to discuss”

As a supervisor, you have the opportunity to ‘break the cycle’.

Ask: “What is meant by stigma of mental illness? And What are some of the reasons it is difficult to talk about resilience and mental health?”

Explain: “Stigma is defined as a sign of disgrace or discredit, which sets a person apart from others. Taking care of our mental health is just as important as wearing a hard hat to protect our heads from falling objects. Supervisors can help overcoming this stigma by making it a regular practice for team members to raise concerns and solutions to job stressors.”

“In some communities it is taboo to talk about mental health. It is important to recognize such barriers and for supervisors to gain skill in addressing mental health, as it is a key part of being healthy. If supervisors are unable to talk about it, they will be less likely to help workers who are struggling.”

Ask: “What can you, as a supervisor, do to help ‘break this cycle’?”

Explain: As a supervisor you can talk about mental health or self care and set the tone for your team. If you promote discussion and do not allow discrimination you may help individuals to not feel fear or feel like they must remain silent.

Slide 13

Review the slide.

Transition: “We will now discuss the various reactions people have to trauma.”
Reactions to trauma may be mild to severe

Symptoms:
- Headache, back ache, stomach ache, difficulty sleeping
- Head feeling "hot", negative thoughts, sadness, feeling numb, flashbacks, depression
- Angry, on edge, jumpiness

Severe:
- The symptoms are very intense and can last for months
- Should seek care

Moderate:
- The symptoms may last for days to several weeks and are more intense

Mild:
- The symptoms are mild and last for a few hours or days

Explain: “Reactions to trauma may run from mild to severe. The impact of exposure to traumatic events during disaster work can have a significant impact on workers and supervisors. Everyone reacts differently to traumatic events and it is common for a group to experience different types of symptoms of different intensity and duration. Don’t be surprised if one person reacts more intensely than others. It is not a sign of weakness.”

“Although many people are uncomfortable talking about mental health, sometimes called behavioral health, it is very important to our physical health and well being.”

Elements of Post Traumatic Stress Disorder (PTSD) definition:
1. Exposure to a traumatic event
2. Severe symptoms lasting more than a month
3. Interference with normal life
4. Diagnosis made by a healthcare professional

Explain: “One of the goals of resiliency programs is to prevent PTSD and to recognize when we need outside assistance.”

“Research has documented that disaster workers experience PTSD more frequently than the average person. The next slide will detail some of these findings.”

Ask: “How big is this problem? The research shows that PTSD post disaster is as high as 40% of the group surveyed. This compares to PTSD in the general US population at 3.6%. Volunteers have had higher rates of PTSD than professional responders. 9/11 volunteers affiliated with an organization had lower rates, compared to volunteers that were not part of an organization. This may be because people volunteering without an organization had more intense exposures and fewer resources. Other mental health effects that are seen at higher rates in workers following disasters include anxiety and depression. This stuff is important!”

Explain: “While disaster workers can develop PTSD it is important to note that most will NOT and that seeking care early will help reduce the impact of a disaster.”
Note This slide emphasizes that training can make a difference.

**Explain:** “Research has also shown that workers who are often on the front line of disasters need training to recognize ‘adverse mental health and behavioral outcomes’ in order to be able to provide assistance and referrals (Beaton et al. 2009). Today’s training aims to do just that.”

---

Review the slide.

**Explain:** “Supervisors can play a valuable role in helping the people they supervise deal with stress and trauma. Today’s program is designed to better prepare you for that role.”

**For your reference: Reported Rates of PTSD Among Various Disaster Workers as reported in recent research.**

Chapter 2—The Important Role of Supervisors

Slide 19

Explain: “Chapter 2 is The Important Role of Supervisors. Understanding and embracing your leadership role is key!”

Slide 20

Review the slide.

Slide 21

Explain: “Supervisors perform a key leadership role in managing disaster work whether it is leading responders, clean-up crews, volunteers, or construction crews. It is the supervisor’s responsibility to make sure the work is carried out properly and effectively, while at the same time ensuring the safety and health of the disaster workers they are supervising.”
**Slide 22**

**Explain:** "Supervisors have many roles on a job site and must balance demands for the job (including speed, goals, and those passed down from superiors) with safety, the needs of workers and their own worries."

**Slide 23**

**Transition:** When we know there are multiple priorities and goals we need to strike a balance.

**Ask:** “How do we balance leading the team to get the work done versus assisting team members who are stressed?"

**Note:** Record responses on a flipchart and then review the bullets.

**Ask:** “What skills are required of a supervisor to maintain this balance?”

**Potential responses:**
- Flexibility
- Clear communication
- Ability to assess a situation
- Clear judgment
- Understanding that there might be other causes for workplace issues (uncertainty about safety, family uncertainty etc)
- Ensure safety first

**Explain:** “Having a personal emergency plan will also help allow supervisors to focus, knowing that their family's needs are being addressed.”
Slide 24

Explain: "It is important to make a distinction between a supervisor’s role in assessing and supporting workers versus crossing the line and potentially violating a worker’s rights or organizational policy."

Caution!
Supervisors are NOT responsible for diagnosing mental health disorders. It is very important that supervisors are cautious when talking to teams about these issues.
Keep in mind:
- Workers have a right to privacy concerning their health.
- Many organizations have written policies and procedures for accessing support that should be followed.
- Workers may be suspicious if their performance on the job is at issue.

Slide 25

Explain: "Disaster workers are subject to fatigue because of the long hours they must work and the stressful conditions they face. Fatigue can increase stress symptoms as well as increase the risk of injuries. While the urgency of disaster work is always present, we should not take unnecessary risks.

Bottom line is: supervisors should know their team’s limits and when they have hit the wall."

"Another fatigue and stress factor is the when workers or volunteers are subject to stressful housing situations. Often workers have been impacted by a disaster, or are not from the disaster area and living in temporary facilities. This can increase stress levels and impact work performance and health."

Note: The US National Response Team has published a detailed technical assistance document, “Guidance for Managing Worker Fatigue During Disaster Operations” which can be accessed online at: [http://www.nrt.org/Production/NRT/NRTWeb.nsf/AllAttachmentsByTitle/SA-1049TADFinal/$File/TADfinal.pdf?OpenElement](http://www.nrt.org/Production/NRT/NRTWeb.nsf/AllAttachmentsByTitle/SA-1049TADFinal/$File/TADfinal.pdf?OpenElement)

Slide 26

Explain: "Every disaster site should be assessed for health and safety and have a site specific health and safety plan. Based on the hazard identification, hazard control measures (ways of preventing hazards) can be selected and implemented. Examples include use of ventilation to control dust, personal protective equipment, and safety procedures such as wetting material that can generate dust when it is ripped out. Clean up and storage facilities are critical to ensure workers can properly clean up after their shift and store their equipment."

Ask: “What other health and safety hazards can contribute to workplace stress?”

Explain: “As supervisors, we can reduce the impact of stress and trauma by providing necessary safety programs, PPE, and equipment. We should always take team members safety and health concerns seriously as stress from the workplace, or that people carry with them, impacts one’s ability to safely perform work.”
Slide 27

Ask: “What are key safety and health ACTIONS that supervisors should take?

Note: Answers may be industry specific. For example, construction workers or volunteers mucking out a house will have different health and safety concerns than case managers or volunteer coordinators.

Possible additional actions:

- Hazard identification and control
- Personal protective equipment
- Matching skills to jobs
- Safety and health training
- Rest breaks and drinking water
- Shelter from weather extremes
- Clean-up and equipment storage facilities

Note: After the class provides input, click on the chart to reinforce key measures.

Slide 28

Ask: How does this material on the supervisor’s role in health and safety apply to today’s subject?

Potential responses may include:

- Eliminating hazards helps reduce the risk of injury and illness and stress
- Addressing stress and trauma is as important as addressing other safety and health issues
- Supervisors have access to resources that workers may not have
- Supervisors have a responsibility for the well being of their team
- Supervisors are in a unique position to identify, assess, and assist health and safety, including stress and trauma

Slide 29

Note: The information on this slide should confirm the responses of the participants.

Supervisory Leadership in Safety & Health

- Eliminating hazards helps reduce the risk of injury and illness and stress
- Addressing stress and trauma is as important as addressing other safety and health issues
- Supervisors have access to resources that workers may not have
- Supervisors have a responsibility for the well being of their team
- Supervisors are in a unique position to identify, assess, and assist health and safety, including stress and trauma
Chapter 3—Understanding Stress

Slide 30

Explain: “Chapter 3 is Understanding Stress”

Slide 31

Review the slide.

Chapter 3 Objectives

After completing Chapter 3, participants will be able to:
- Define different type of stress
- Identify personal and disaster work related stress factors
- Describe reactions to stress
- Identify and address stress in workers and team members

Slide 32

Review the slide.

Explain: “Stress is a normal psychological reaction to situations in your life such as the death of a loved one or starting a new job. Stress can be protective in helping to mobilize action to deal with the stressors, whether positive or negative. That is why it is considered necessary for health and survival. When people are overwhelmed by stress or don’t recover from stress, it can cause negative health effects.”
**Slide 33**

**Kinds of Stress and PTSD**

- Acute (Short-term) Stress
- Cumulative (Long-term) Stress
- Traumatic Stress
- Post Traumatic Stress Disorder

*Explain:* “We will now go over the different types of stress and also discuss PTSD. PTSD has already been defined in the introductory chapter.”

“After we cover these subjects we will review the different kinds of reactions people have to stress. We are not trying to teach you to become stress counselors, but to recognize possible reactions and changes in ourselves, our co-workers, and families.”

**Slide 34**

**Acute Stress**

- Enables rapid reactions to changing situation
- Enhances survival thinking
- Enables people to focus to eliminate distractions
- Most people deal with it daily and recover

Symptoms may include:

- Rapid heart rate
- Sweating

*Explain:* “Acute stress is short term and can be part of our ‘fight or flight’ reaction. Another example is when someone cuts in front of you on the highway. You can feel your body react and then recover from the shock of it quickly.”

**Slide 35**

**Cumulative Stress**

- Grindering stress, hopelessness, that wears people down over time
- Produces negative changes in:
  - Mental and physical health
  - Performance
  - Relationships
  - Personality

Symptoms may include:

- Chronic migraine
- Sleeplessness

*Explain:* “Cumulative stress is sometimes called “chronic stress”. Chronic means long term. This is a build-up of stress over time. An example would be repeated exposures to multiple disasters such as 3 hurricanes in one year.”

**Slide 36**

**Traumatic Stress**

- Starts with exposure to a traumatic event such as death of a loved one
- Represents a normal response to an abnormal event
- Most people recover
- Early support can help reduce reactions
- Can be an opportunity for positive changes and growth

*Explain:* “It is very important for supervisors to be prepared deal with their own reactions and that of their team members when traumatic events are witnessed during disasters. Preparation can help to reduce the impact.”
Slide 37

**PTSD**
- A severe stress reaction with symptoms lasting more than one month
- Symptoms may include:
  - intense fear
  - helplessness and hopelessness
  - flashbacks
  - nightmares
- Most workers who live through a traumatic event will not develop PTSD

**Explain:** “PTSD is a severe stress reaction. It is when symptoms persist for more than a month. A medical doctor or psychologist determine if a person has PTSD. One goal of resiliency programs is to prevent disaster workers from developing PTSD. Addressing stress and trauma early can help to prevent the more severe reactions.”

Slide 38

**Compassion Fatigue and Vicarious Trauma**
- Often affects individuals who care for those impacted by a disaster
- Emotional trauma caused by indirect exposure to trauma through firsthand accounts or narratives
- May be caused by:
  - Demands/tasks or particularly stressful situations
  - Repeated exposure to first hand accounts of traumatic events
- Symptoms may include:
  - Lack of sympathy or empathy for survivors or clients
  - Avoiding others
  - Feeling inadequate

**Explain:** “Providing support to people who are traumatized may also cause an emotional reaction called vicarious traumatization or compassion fatigue. Vicarious Trauma/Compassion Fatigue may occur when traumatic events are recounted to an individual multiple times, leading to transference of the stress to the listener, causing them to feel tired and/or fatigued. This is most common for case workers, caregivers and other trained individuals who support disaster victims.”

**Symptoms may include:**
- Excessive blaming
- Isolation from others
- Dreading listening or meeting with survivors
- Difficulty concentrating
- Feelings of inadequacy

**Note:** Individuals who work with disaster victims are trained to recognize these symptoms and victims should NEVER feel guilty telling their story if they would like to speak.

Slide 39

**Self-Care and Stress Management**
- Actions individual workers can take to increase resiliency
- Healthy habits such as eating, sleeping, engaging in positive activities, and socializing
- Connecting with others, giving and receiving social support

**Explain:** “This slide defines self-care and stress management.” Attending available training programs is another important step to take to be prepared for the stresses of disaster work. Supervisors should engage in their own self-care and stress management and encourage team members to do so as well.”
Explain: “We will now review the four categories of reactions that people have when exposed to traumatic events. People react differently to traumatic events and it is important to understand the varying types of reactions that may occur.”

Note: Appendix 5 of the participant manual contains a handout entitled ‘When Terrible Things Happen’ that participants may reference.

Review the slide.

Note: This slide is a review of the material presented on the immediate reactions to trauma.

Explain: Some reactions to stress can be positive, providing motivation for action, while others may be negative. Remember that not all reactions, positive or negative, are visible. As a supervisor, you know your team best, and may be able to recognize some of these symptoms as reactions to stress.

Activity 2: “Complete the “personal stress inventory” on page 19 of the Participant Manual. The instructions are at the top of the page.”

Note: See the next slide for instructions.

Activity 2: Individuals will complete the “personal stress inventory”. The instructions are at the top of the page.

Time for activity: 10 minutes

Objective: Raise participants awareness of the personal stress in their lives.
**Explain:** “This is an individual activity. Participants will check yes or no for each event and place the number of points when the answer is yes. You will then add up the totals using a smart phone or calculator. Do you have any questions about this activity before we get started?” “This exercise is to raise awareness of our own personal stressors, that are part of life’s journey. Even positive events like getting married or having a child are high level stressors. The instructions are at the top of the page.”

**Ask:** “Were you surprised by anything in the survey?”

**Explain:** “As a supervisor it is important to be aware that each individual in your crew has their own personal stress inventory. This is just one reason why it is so important to be a good listener and approach each team member’s needs individually. It can also help in understanding your own reaction to events.”

**Explain:** “While its important to understand your own stress, its also important to realize that those on your work team will also be experiencing these stressors. After a disaster, they are only compounded.”
Personal Stress Inventory

**Instructions:** This is an individual activity developed by Holmes and Rahe to investigate the relationship between events that happen to us, stress and susceptibility to illness. Check yes or no for each event that happened to you in the past 12 months and place the number of points in the score column when the answer is yes. Then add up the totals using a smart phone or calculator.

200-299 moderate stress 50% chance of illness or health change
300+ major stress 80% chance of illness or health change.

Slide 44

**Personal Growth after Traumatic Events**
- Refers to people who have experienced positive changes after exposure to a traumatic event.
- These changes may include:
  - Improved relationships.
  - New possibilities for one’s life.
  - A greater appreciation for life.
  - A greater sense of personal strength and spiritual development.

**Explain:** “A basic contradiction learned by trauma survivors who report posttraumatic growth: Their losses have produced valuable gains. Another contradiction is in the statement, ‘I am more vulnerable, yet stronger’.”

**Ask:** “Can you give examples of how traumatic events can lead to positive changes?”

**Note:** List the participants’ examples on a flipchart.

**Additional Examples:**
- A person who has a heart attack, changes to a healthier lifestyle.
- Appreciating family and friends more
- Addressing difficulties through positive action
- Shifting expectations day to day
- Focusing more on quality time with family or friends
- Increasing commitment to self, family, friends, and spiritual/religious faith

**Transition:** “We will now move into reviewing the usual types of reactions people have when exposed to traumatic events. Recognizing the reactions is key to knowing when to seek or offer assistance.”

---

Slide 45

**What are reasons team members may avoid seeking support?**
- Feeling embarrassed or weak
- Feeling they will lose control
- Doubting it will be helpful
- Wanting to avoid thinking or feeling about the event
- Feeling that others will be judgmental
- Not knowing where to get help
- Fearing for their job
- Not trusting their supervisor/employer
- Not recognizing that they need help
- Assume it’s ‘part of the job’

**Explain:** “Remember workers are entitled to privacy and confidentiality when it comes to their personal health issues. Building trust is essential when talking to team members about these matters.”

---

Slide 46

**How can supervisors support a stressed team member?**
- Understand that changes in behavior may be a stress reaction
- Don’t be quick to reprimand
- Give team members an opportunity to talk about it, vent their frustrations
- Bring in a trusted third party to help
- Provide extra breaks and a safe work environment
- Allow team members to give input on how to improve the work

**Ask:** “How can supervisors respond if team members are experiencing stress reactions?”
Activity 3: Support. Tell the participants to, “Turn to page 21 in the Participant Manual and list ways you can help a worker who may need help, but who might not be comfortable talking with you, or at all.

Task: Brainstorm ways Supervisors can support workers who may be uncomfortable talking.

Activity 3:

**Supporting a Worker Who Doesn’t Want to Talk**

*Time for activity:* 5 minutes or less

*Objective:* Identify techniques Supervisors can use to support team members who don’t want to talk about it

*Task:* Brainstorm ways Supervisors can support workers who may be uncomfortable talking.

Possible answers to Activity 3
- Let them know you are concerned and available to talk when they are ready to do so
- Offer to meet with them in a private, confidential setting and make it clear you want to mainly hear what they have to say
- Offer a referral to any Employee Assistance Program, community or other available resources
- Suggest that a trusted friend or co-worker approach the individual
- If appropriate, allow the individual some time to call family, friends, or otherwise decompress

Review the slide.
Slide 49

Ask: “What can you do if you, the supervisor, are the most stressed out person in the room?”

Note: Ask the question and then review the answers.

What can you do if you are the most stressed person in the room?
- Recognize your own reactions to stress
- Recognize that your behavior will impact the team
- Defer any actions that you may regret
- Take a break
- Seek assistance
Chapter 4—What Helps?

Slide 50

Explain: “In this chapter we will cover actions that can be taken by individuals, employers, and organizations to promote resiliency and support disaster workers who are exposed to stress and trauma. We will place a special emphasis on the supervisors’ role.”

Slide 51

Review the slide.

Note: Before moving to the next slide…

Ask: “Why do we intervene?”

Responses may include:

- Because we care
- Because exposure to stress and trauma are an expected part of disaster work
- To minimize the negative impact of stress and trauma
- For supervisors, responding is key to keeping the workforce safety and healthy and protecting the work organization from losses.

Slide 52

Explain: “Supervisors may encourage helpful self-care by being a positive example and by making helpful suggestions when we suspect a team member is struggling. The daily debriefing is an effective way of bringing the team together, to communicate with members, and also to take a reading of how the team is doing. Supervisors can try to make adjustments based on input from the team or our own observations.

Ask: What are some positive actions that Supervisors and Workers can take if they are dealing with stress?”
Ask: “What are some of the actions that should NOT be taken when stressed?”

Explain: “Actions that do not help, such as use of alcohol or drugs can also have negative impacts on worker productivity, and even job site safety.”

“As supervisors, you may notice your team doing both positive and negative activities to cope. If you notice negative ones, it may be important to address these, for both the workers own good and for the good of the team.”

Transition: “We will now move to discuss how supervisors may encourage workers to seek care and how supervisors can provide support.”

Explain: “Supervisors can play an important role in helping team members who need support.”

Explain: “These are basic tips for giving support to team members. We are not training you to become counselors, but everyone can help by showing concern, respect, and support to people who are stressed.

Active listening is key. It is form of listening and responding that focuses the attention on the speaker. The listener must take care to attend to the speaker fully, and then repeats, in the listeners own words, what he or she thinks the speaker has said.

Keep in mind, some team members may not be comfortable talking to their supervisor about their stress reactions. In that case, you may try to get a coworker to help.”

Explain: “This slide gives examples of language that can discourage workers and NOT promote care seeking. Remember that Body language is also important. The point is to mainly listen and not say things that are judgmental or deny a person’s feelings.”
Note: Review and discuss the four tips and why they are necessary to active listening. Emphasize the importance of giving the speaker full, uninterrupted attention. Discuss the importance of body language and demonstrate examples both positive and negative.

Transition: Because active listening is such a key skill in assessing and supporting workers, the next activity allows participants to practice it.

Pair exercise, refer to page 25 of the Participant Manual.

Task: Break into pairs and take turns listening to each other without distraction. The speaker should describe their morning routine in two minutes. After completing the exercise, discuss as a group what was learned.

Note: An additional, or alternate activity on Active Listening is attached as appendix 3.

**Activity 4:**

**Active Listening**

*Time for activity: 15 minutes or less*

*Objective:* Practice active listening skills supervisors can use when interacting with team members

*Task:* Break into pairs and take turns listening to each other without distraction. The speaker should describe their morning routine in two to three minutes while the listener practices active listening. Switch roles after two minutes. After completing the exercise, discuss as a group what was learned.
Note: There is an alternate or additional scenario that may be used. The additional/alternate scenario is on page 41 of Participant Manual and slide 75 of PPT deck.

**Activity 5:** “We will now conduct a role play and large group activity on page 26 of the Participant Manual.

**Role Play:** Select two instructors or participants to act out the role of John and his supervisor. Have another person read the scenario out loud to the class.

**Group Activity:** Involve the entire class in discussing the scenario and questions below.

**Note:** You can modify the scenario to one that is specific to the participants work experience. An alternative scenario is available in Appendix 4 of your manual.

**Transition:** The scenario and questions are on the next 2 slides.
Activity 5:
Sharing and discussing supervisory action to identify and manage team stress

Time for Activity: 15 minutes

Objective: The goal of this activity is to recognize behaviors that may indicate a stress reaction and identify steps supervisors can take to assist effected team members.

Task: Review the scenario on the next slide and answer the questions below it.

Scenario: The team has been onsite for two weeks doing debris removal in flooded neighborhoods. Effected families have been forced to evacuate, reside in temporary housing, and many have lost their employment. There were a number of fatalities on the day of the storm. The crew has worked 12 hour days helping home owners remove water damaged furniture, possessions, and building materials. Unexpectedly, the team has spent a good amount of time speaking to homeowners, including giving them advice about what to throw out and what to keep. This has often led to conversations regarding their losses and grief. John, who is normally a productive member of the work team and socially engaged, has been taking frequent long breaks outside the residence where he has been observed “staring into space”. Earlier in the shift he was engaged in a heated argument with a coworker who was getting on him about “not carrying his weight”. The work contract calls for the completion of two homes per day, and with a crew of four, John’s performance may set back the schedule.

What are some of the reactions to stress you notice in John?

__________________________________________________________________________

How can you assess the problem?

__________________________________________________________________________

How should you approach John?

__________________________________________________________________________

What actions might you take to address the problem? What actions should be avoided (would make it worse)?

__________________________________________________________________________

__________________________________________________________________________
**Scenario:** The team has been onsite for two weeks doing debris removal in flooded neighborhoods. Effected families have been forced to evacuate, reside in temporary housing, and many have lost their employment. There were a number of fatalities on the day of the storm. The crew has worked 12 hour days helping home owners remove water damaged furniture, possessions, and building materials. Unexpectedly, the team has spent a good amount of time speaking to homeowners, including giving them advice about what to throw out and what to keep. This has often led to conversations regarding their losses and grief. John, who is normally a productive member of the work team and socially engaged, has been taking frequent long breaks outside the residence where he has been observed “staring into space”. Earlier in the shift he was engaged in a heated argument with a coworker who was getting on him about “not carrying his weight”. The work contract calls for the completion of two homes per day, and with a crew of four, John’s performance may set back the schedule.

**Transition:** Activity 5 questions are on the next slide.

---

**Supervisory Action?**

**Ask:**

1. "What are some of the reactions to stress you notice in John? Not being productive, not engaging with the team, taking long breaks, staring into space, arguing with coworkers. General changes out of character.

2. How can you assess the problem? Arrangeto meet with him or have an appropriate organizational representative meet with him.

3. How should you approach John? At a time/location that will confidential and in a matter that is not threatening.

4. What actions might you take to resolve the problem? Give him an opportunity to express his feelings, let him know he valued and express concern about his well-being, offer a break, a different task, or time off to remove him from the source of the stress for the day (away from the stress of speaking to homeowners), assign to work with a trusted co-worker, offer whatever supportive services the organization can provide.

5. What actions should be avoided would make it worse? Threatening John or threatening his job, calling him out in front of the team, telling him to ‘tough it out’, not using appropriate body language or active listening, etc.
Review the slide.

Explain: “These symptoms should not be ignored.”

Explain: “When a disaster hits and a community is declared a federal disaster zone, funding is usually directed at developing mental health outreach services. An example is Project Hope, coordinated by the New York State Office of Mental Health after Superstorm Sandy. The project employed people for a one year period to provide supportive counseling to individuals, families, and groups impacted by the hurricane.

Additionally, many communities have mental health services that are hospital based. Some of these programs include mobile emergency mental health programs as well. These resources are often mobilized to assist in disasters. It is valuable for organizations to develop a list of the local area resources that may be useful to disaster workers, volunteers, or homeowners who need services.”

Explain: “Faith based organizations involved in responding to disasters that provide mental health services are also an important resource.”

Explain: “Disaster Distress Helpline is a 24/7 helpline designed for those experiencing stress, anxiety and distressing reactions. This free helpline is staffed by trained counselors from a network of crisis call centers located across the United States, all of whom provide crisis counseling for those who are in emotional distress related to any natural or human-caused disaster, information on how to recognize distress and its effects on individuals and families, tips for healthy coping, and referrals to local crisis call centers for additional follow-up care & support.

Call 1-800-985-5990 or Text ‘TalkWithUs’ to 66746

You may also download the SAMHSA Disaster App to your mobile phone.”

Note: This is NOT only for substance abuse issues. If you have internet access you can click on the link to show the resources.
Explain: “In some areas of the country access to professional services is slim or non-existent. In those cases, the best choice is to visit the family doctor or the community clinic. If the need for services is “work related” than the employer should provide information and support for accessing workers’ compensation benefits. These benefits will include medical care and wage replacement. However, many state workers’ compensation systems frequently contest claims for mental health care. In those cases, injured workers need to use a qualified workers’ compensation attorney to represent them. These attorneys are not paid a fee from the injured worker, but only get a small percentage when the workers’ compensation law judge awards compensation.

It is valuable for supervisors to be familiar with the organization’s benefits and procedures so that they assist and advise the people they are supervising when they need to access these resources.”

Explain: “Just as organizations have a responsibility to protect the safety and health of employees, they should also be prepared to address the impact of stress and trauma on employee health and well being. There are various approaches to providing this support. Some organizations have instituted Critical Incident Stress Management Teams (CISM), Trauma Response Teams, or other approaches. If your organization has such a team, you should become knowledgeable about how it works and especially how your team members can access its services.

If you think your organization needs a team, you will need to work with the organizational leadership to discuss the feasibility of establishing a team and researching what type of program will meet your needs. One of the newer approaches is to develop peer based teams that are trained in psychological first aid (PFA).

What is Psychological First Aid? It is an evidence based approach to helping people who are exposed to a traumatic event by providing support, education, and referrals. People trained in PFA will promote: safety, calm, connectedness, self-help, and referrals to resources. PFA is not counseling and is generally provided on an individual, rather than group basis. There are concerns that group psychological debriefing may lead to increased symptoms among some group members.”
Explain: “Asking for help is not a sign of weakness, but a sign of strength.”

Ask: “What is meant by stigma of mental illness?”

Explain: “Stigma is defined as a sign of disgrace or discredit, which sets a person apart from others. Taking care of our mental health is just as important as wearing a hard hat to protect our heads from falling objects. Supervisors can help overcoming this stigma by making it a regular practice for team members to raise concerns and solutions to job stressors.”
Chapter 5—Resilience and Traumatic Stress, What is to be done?  35 Minutes

Slide 68

Explain: “Chapter 5, the final section, covers “Resilience and Traumatic Stress: What is to be done?”

Slide 69

Review the slide.

Chapter 5 Objectives
After completing Chapter 5, participants will be able to:
- Define key aspects of worker resiliency
- Identify resources available for support
- Describe steps that individuals, supervisors, and organizations may take to increase resistance to trauma, stress, and improve resiliency

Slide 70

Explain: “This slide is here to remind you of the definition of resiliency. The source is: Merriam-Webster.com”

Definition of Resiliency
The ability to become strong, healthy, or successful again after something bad happens.

It means “bouncing back from difficult experiences”.
Activity 6: Participants will individually complete the exercise on page 29 of the Participant Manual.

Action Planning for Resiliency and Traumatic Stress.

Time for activity: 20 minutes (5 - 10 for completion; 10 for report back)

Objective: “The goal of this activity is to begin developing an action plan on the individual and workplace organizational levels that will promote resiliency.”

Task: Based on the lessons learned in today’s program I will take the following actions

• List one or more steps you may take as an individual to increase resistance to trauma, stress, and improve resiliency.
• List one or more steps you may take as a supervisor to increase resistance to trauma, stress, and improve resiliency.
• List one or more steps your employer or organization may take to increase resistance to trauma, stress, and improve resiliency.

Note: In doing the report back and discussion on Activity 6, it is important to be sensitive that some participants may be uncomfortable sharing their personal goals. For example, you may ask, “Does anyone want to share steps they plan to take individually or with their employer/organization based on today’s training program?” If the participants don’t want to share it is important to respect that. Some participant groups are comfortable sharing goals and it can be very constructive when peers share the actions they plan to take to better themselves or their organizations. Another approach is to have participants work in pairs (buddies). This may take some of the personal edge off of sharing.
Activity 6

Sharing your experience and thoughts on self-care and stress management.

**Small Group Activity Method:** Divide into small groups, select a member to record the responses and do the report back. Participation may be maximized by allowing everyone to speak, going around the circle.

**Time for activity:** 20 minutes (5 -10 for group work and 10 for report back)

**Objective:** The goal of this activity is to share and discuss your experiences related to self-care and stress management with your fellow participants and instructors.

**Task:** Answer each of the questions:

1. What helps?
   - Healthy habits such as eating, sleeping, engaging in positive activities, and socializing
   - Connecting with others, giving and receiving social support
   - Daily debriefing

2. What doesn’t help?
   - Using alcohol or drugs to cope
   - Working too much
   - Extreme avoidance of thinking or talking about the event
   - Extreme withdrawal from family or friends
   - Violence or conflict
   - Not taking care of yourself
   - Overeating or failing to eat
   - Withdrawal from pleasant activities
   - Doing risky things such as driving recklessly, substance abuse, staying out late at night
   - Blaming others
   - Keeping quiet because you don’t want to upset others
   - Keeping quiet because you’re worried about being a burden
   - Assuming that others don’t want to listen
   - Waiting until you’re so stressed or exhausted that you can’t fully benefit from help
**Slide 72**

**Explain:** “In an effort to continuously improve the Disaster Worker Resilience Training Program, we are requesting that you evaluate the effectiveness of the training that you attended. Please be open and honest in your responses. To ensure your confidentiality, do not provide any personal identification on the form.

**Note:** Make sure participants complete the evaluation forms and end with the final slides. You may choose to use your own evaluation tool or the evaluation form in Appendix 6 in the Participant Manual. If you use your own form, then be sure to provide relevant instructions. If you use the evaluation form in Appendix 6 in the Participant Manual, then the instructions below apply.

**Explain:** “In each section, you are asked to rate how well you feel you achieved each of the course learning objectives or about course effectiveness. Using the rating scale where 1 equals strongly disagree and 7 equals strongly agree, mark the circle that most closely reflects your answer to each statement. Also provide any comments to the 3 questions on the back of the form.”

**Slide 73**

**Explain:** “Thank you for attending this important program. Please use the information in your supervisor’s manual as a reference for yourself, your families, your co-workers, and your organizations. The activities that you have completed today should help you on the road to resilience. Especially important is to follow-up on the self-care and stress management plans generated in today’s training. Also, consider talking to your employer, union, or organization about the value of addressing these important issues. Remember, addressing stress, trauma, and overall mental health is an essential step in our journey to health, safety, and well being.”

**Slide 74**

**Explain:** “In closing, we acknowledge the sources that were used to develop this training program and thank them for the use of their materials.”
Optional Slide: Alternative Scenario for Activity 5.

**Scenario:** In a community impacted by flooding due to a hurricane, families have been forced to evacuate, reside in temporary housing, and many have lost their employment. There are a number of challenges on the day of the storm. The disaster case management team has been working in the area serving community members for six months providing assistance to survivors and responding to human needs. Sally, a member of the management team, is frustrated in the amount of time it is taking to get assistance and return to homes. The team consists of six senior case managers and six newly trained case managers. The team has been trained to support each other. However, the more senior managers tend to socialize with each other and the newer case managers have been left to themselves. Sally, who is a member of the community, and one of the newer team members, has been a positive influence and is very helpful. She shows a great amount of empathy for her clients. Sally has strength from her strong religious beliefs and a high sense of duty. She has supported Sally in her work, especially during this time. Sally and Sally are talking about loss of faith and why would “God let this happen?” Most recently, Sally was overheard by her supervisor speaking with one of her clients and saying “Mrs. Jones, you should consider yourself one of the lucky ones. I have clients that not only lost their homes like you, but also lost a loved one.”
Glossary of terms and acronyms used or related to the training:

The following definitions have been adapted from a variety of resources, including Medline Plus, the Substance Abuse and Mental Health Services Administration within the U.S. Department of Health and Human Services and the National Institute of Mental Health.

**Acute Stress**

Acute stress is short term stress and is the most common form of stress. It comes from demands and pressures of the recent events and anticipated demands and pressures of the near future. Acute stress is thrilling and exciting in small doses, it can help us react to new situations, but too much is exhausting. Too much short-term stress can lead to psychological distress, tension headaches, upset stomach and other symptoms.

**Anxiety Disorders**

Long term feelings of overwhelming worry, nervousness, unease, and fear, with no obvious source, that can grow progressively worse if not treated. The anxiety is often accompanied by physical symptoms such as sweating, heart rhythm disturbances, diarrhea or dizziness. Anxiety disorders are anxiety that lasts at least 6 months and can get worse. (This is different from short term Anxiety, which is a normal part of life, such as before speaking to a group, or before a date1)

**Chronic Stress**

Chronic stress is long term grinding stress that wears people away day after day, year after year. It’s the stress of “never ending troubles”. Chronic stress comes when a person never sees a way out of a miserable situation. It’s the stress of having non-stop demands and pressures that seemingly never end that eventually takes a physical and emotional toll on individuals.

**Cognitive**

Means how we think and involves thinking, understanding, learning, and remembering.

**Coping**

The process of dealing with internal or external demands that feel threatening or overwhelming.

**Cultural Competence**

A group of skills, attitudes and knowledge that allows persons, organizations and systems to work effectively with diverse racial, ethnic and social groups.

Cumulative Stress
Cumulative stress is prolonged, long term exposure to stress triggers that can lead to stress disorders and psychological problems; The combination, or ‘piling on’ of all stress factors in one’s life.

Department of Health and Human Services (HHS)
The United States government’s principal agency for protecting the health of all Americans and providing essential human services, especially for those who are least able to help themselves.

Depression
In psychiatry, a disorder marked especially by sadness, inactivity, difficulty with thinking and concentration, a significant increase or decrease in appetite and time spent sleeping, feelings of dejection and hopelessness and sometimes suicidal thoughts or attempts to commit suicide. Depression can range from mild to severe, and is very treatable with today’s medications and/or therapy.

Early Intervention
In mental health, diagnosing and treating mental illnesses early in their development. Studies have shown early intervention can result in higher recovery rates. However, many individuals do not have the advantage of early intervention because the stigma of mental illness and other factors keep them from pursuing help until later in the illness’ development.

Emotional Distress
Some combination of anger or irritability, anxiety and depression. Showing distress through exaggerated, or heightened emotions.

Fatigue
Lack of energy and motivation. This may include drowsiness but is not just ‘feeling tired’. Fatigue is a component of depression and can be diagnosed by a doctor.
Mental Health

The condition of being mentally and emotionally sound and well adjusted, characterized by the absence of mental disorder and by adequate adjustment. Individuals with mental health feel comfortable about themselves, have positive feelings about others and exhibit an ability to meet the demands of life. Mental Health is also called Behavioral Health.

Mental Health Services

Services that help improve the way individuals with mental illness feel, both physically and emotionally, as well as the way they interact with others. Services may include diagnosing or treating a mental illness and preventing future mental illness in those who are at a high risk of developing or re-developing mental illness.

Mental Illness (Psychiatric Illness)

Refers to all diagnosable mental disorders. Can refer to disorders of the brain or personality which may include visible and invisible (behavioral) symptoms as well as physical symptoms. Formal diagnosis is based on guidelines and definitions of psychiatric illness listed in Current Medical Information and Terminology of the American Medical Association or in the Diagnostic and Statistical Manual for Mental Disorders of the American Psychiatric Association.

National Institute of Environmental Health Sciences (NIEHS) and National Institutes of Health (NIH)

The National Institute of Environmental Health Sciences (NIEHS) is one of 27 research institutes and centers that comprise the National Institutes of Health (NIH), U.S. Department of Health and Human Services (DHHS). The mission of the NIEHS is to discover how the environment affects people in order to promote healthier lives.

Panic Disorder

A type of anxiety disorder in which individuals have feelings of terror that strike suddenly and repeatedly with no warning. Individuals cannot predict when an attack will occur and may experience anxiety and worry between attacks as they wonder about when the next one will strike. Symptoms can include heart palpitations, chest pain or discomfort, sweating, trembling, tingling sensations, a feeling of choking, fear of dying, fear of losing control and feelings of unreality.
Phobia
An intense and sometimes disabling fear reaction to a specific object or situation that poses little or no actual danger. The level of fear is usually recognized by the individual as being irrational. (Common examples include fear of heights, fear of clowns etc.)

Posttraumatic Growth
Posttraumatic Growth (PTG), refers to positive psychological change that occurs as the result of one’s struggle with a highly challenging, stressful, and traumatic event. Five factors are contained within PTG including Relating to Others (greater intimacy and compassion for others), New Possibilities (new roles and new people), Personal Strength (feeling personally stronger), Spiritual Change (being more connected spiritually), and a deeper Appreciation of Life.

Posttraumatic Stress Disorder (PTSD)
A diagnosable mental disorder that is severe, disabling, and prolonged. A psychological reaction that occurs after experiencing a highly stressing event, such as wartime combat, violence or a disaster. It is usually characterized by depression, anxiety, flashbacks, recurrent nightmares and avoidance of reminders of the event. Individuals can feel emotionally numb, especially with people who were once close to them. Also called delayed-stress disorder or posttraumatic stress syndrome.

Psychiatry
The branch of medicine that deals with the science and practice of treating mental, emotional or behavioral disorders.

Recovery
A process by which people who have a mental illness are able to return to work, learn and participate fully in their communities. For some individuals, recovery is the ability to live a fulfilling and productive life despite a disability. For others, recovery implies the reduction of symptoms.

Resilience
An ability to recover from or adjust to significant challenges. The ability to continue on in the face of difficult circumstances.
Screening

In mental health, a brief assessment used to identify individuals who have mental health problems or are likely to develop such problems. If a problem is detected, the screening can also determine the most appropriate mental health services for the individual.

Stigma

A mark of shame or discredit. A sign of social unacceptability.

Substance Abuse

The inappropriate use of, and possibly addiction to, illegal and legal substances including alcohol and prescription and non-prescription drugs.

Substance Abuse and Mental Health Services Administration (SAMHSA)

An agency within the United States Department of Health and Human Services (HHS) that is committed to improving the lives of people with or at risk for substance abuse or mental illness. SAMHSA’s vision is “A life in the community for everyone, based upon the principle that people of all ages with or at risk for substance abuse disorders and mental illnesses should have the opportunity for a fulfilling life that includes a job, a home, and meaningful relationships with family and friends.”

SAMHSA provides factsheets on most mental health conditions and suggestions for referral. They have hotlines for anyone who needs mental health counseling at any time.

- Suicide Prevention Lifeline: 1-800-273-TALK (8255)
- Disaster Distress Helpline: 1-800-985-5990 or text ‘TalkwithUs’ to 66746
- Treatment Referral Line- 1-800-662-HELP (4357)

Therapy

Treatment of physical, mental or behavioral problems that is meant to cure or rehabilitate. Therapy may include discussions with a therapist, medications or Psychotherapy, which emphasizes substituting positive responses and behaviors for negative ones.
Traumatic Event

An event that has the power to overwhelm the normal coping abilities of an individual or group such as disasters, physical or sexual assault, fatal or serious injury or accident, or exposure to death and destruction.

Traumatic events are shocking and emotionally overwhelming situations that may involve the threat of death, serious injury, or may cause or threaten physical well being.

Traumatic Stress

Traumatic stress is stress caused by exposure to traumatic events. Reactions to traumatic events vary and range from relatively mild, minor disruptions in the person’s life to severe and debilitating. Acute Stress Disorder And Posttraumatic Stress Disorder are mental health diagnoses associated with traumatic stress reactions.

Trigger

A sight, sound, smell or event that reminds individuals of a past traumatic event and can cause a person to re-live the event and/or have an emotional reaction.

Vicarious Trauma

Sometimes also called compassion fatigue, vicarious trauma is the latest term that describes a transference of trauma symptoms to care givers. It is the “cost of caring” for others. It is believed that counselors working with trauma survivors experience vicarious trauma because of the work they do. Vicarious trauma is the emotional residue of exposure that counselors have from working with people as they are hearing their trauma stories and become witnesses to the pain, fear, and terror that trauma survivors have endured.
APPENDIX 2

Work Related Stress: Self-Assessment and Personal Goals

On the left hand side of the activity worksheet you write down your current practices regarding sleep, healthy eating, exercise, and socializing. On the right side, you write down any new personal goals you wish to establish. See factsheet in Appendix 5 entitled “Caring For Yourself in the Face of Difficult Work” for information on recommendations for healthy sleeping, eating, exercise, and social support.

This activity is an additional or alternate to activity 4.

**Active Listening**

**Time for Activity:** 15 minutes

**Objective:** Help participants better understand areas in which they can improve their listening.

**Task:** Each participant will individually complete the survey on listening bad habits below to honestly evaluate their listening habits. Place a check next to the bad habits that you may practice when communicating with others. Then the entire group will discuss what they learned and any other bad habits they are aware of.

**Note:** Most people have some problems being good listeners and these bad habits are not unusual. The most important thing is to be aware of these bad habits and try to avoid them. It’s all part of human nature.

**Listening Bad Habits Checklist**

- [ ] I interrupt often or try to finish the other person’s sentence.
- [ ] I jump to conclusions.
- [ ] I am often overly parental and answer with advice, even when not requested.
- [ ] I make up my mind before I have all the information.
- [ ] I am a compulsive note taker.
- [ ] I don’t give any response afterward, even when I say I will.
- [ ] I am impatient.
- [ ] I lose my temper when hearing things I don’t agree with.
- [ ] I try to change the subject to something that relates to my own experiences.
- [ ] I think more about my reply while the other person is speaking than what he or she is saying.
Supporting a Worker Who Doesn’t Want to Talk

Time for Activity: 15 minutes

Objective: The goal of this activity is to recognize behaviors that may indicate a stress reaction and identify steps supervisors can take to assist effected team members.

Task: Select two instructors or participants to act out the role of Sally and her supervisor. Have another person read the scenario out loud to the class.

Group Activity: Involve the entire class in discussing the scenario and questions below (slide 75).

Scenario: In a community impacted by flooding due to a hurricane families have been forced to evacuate, reside in temporary housing, and many have lost their employment. There were a number of fatalities on the day of the storm. The disaster case management team has been working in the area serving community members for six months providing assistance to survivors filling out FEMA applications and accessing services. There is a growing frustration in the amount of time it is taking to get assistance and return to home. The team consists of six senior case managers and six newly trained case managers. The team has been trained to support each other. However, lately the more senior managers tend to socialize with each other and the newer case managers have been left to themselves. Sally, who is a member of the community, and one of the newer team members has been a positive influence on the team. She is normally friendly and shows a great amount of empathy for her clients. Sally draws strength from her firm religious beliefs and church groups. As of late Sally has exhibited changes in her beliefs, often talking about her loss of faith and why would “God let this happen”. Most recently, Sally was overheard by her supervisor speaking with one of her clients and saying “Mrs. Jones, you should consider yourself one of the lucky ones. I have clients that not only lost their homes like you, but also lost a loved one.” Sally who normally doesn’t drink alcohol, has started going to bars with her team and have 3 glasses of wine after work.

Questions to consider:

- What are some of the reactions to stress you notice in Sally?
- How can you assess the problem?
- How should you approach Sally?
- What actions might you take to resolve the problem?
- What actions should be avoided (or would make it worse)?
**APPENDIX 5**

**When Terrible Things Happen**

**What You May Experience—What Helps and What Doesn’t**

### Immediate Reactions

There are a wide variety of positive and negative reactions that disaster workers, volunteers, or homeowners can experience during and immediately after a traumatic event. These include:

<table>
<thead>
<tr>
<th>Domain (thoughts)</th>
<th>Negative Responses</th>
<th>Positive Responses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cognitive</td>
<td>Confusion, disorientation, worry, intrusive thoughts and images, self-blame</td>
<td>Determination and resolve, sharper perception, courage, optimism, faith</td>
</tr>
<tr>
<td>Emotional</td>
<td>Shock, sorrow, grief, sadness, fear, anger, numb, irritability, guilt, shame, and crying</td>
<td>Feeling involved, challenged, mobilized</td>
</tr>
<tr>
<td>Social</td>
<td>Extreme withdrawal, interpersonal conflict, risky behavior</td>
<td>Social connections, generous helping behaviors</td>
</tr>
<tr>
<td>Physical</td>
<td>Fatigue, headache, muscle tension, stomachache, increased heart rate, exaggerated startle response, difficulties sleeping</td>
<td>Alertness, readiness to respond, increased energy</td>
</tr>
</tbody>
</table>

### Common reactions that may continue include:

**Intrusive reactions:**
- Distressing thoughts or images of the traumatic event while awake or dreaming
- Upsetting emotional or physical reactions to reminders of the experience
- Feeling like the experience is happening all over again (flashback)

**Avoidance and withdrawal reactions:**
- Avoid talking, thinking, and having feelings about the traumatic event
- Avoid reminders of the event (places and people connected to what happened)
- Restricted emotions; feeling numb
- Feelings of detachment and estrangement from others; social withdrawal
- Loss of interest in usual pleasurable activities

**Physical arousal reactions:**
- Constantly being “on the lookout” for danger, startling easily, or being jumpy
- Irritability or outbursts of anger, feeling “on edge”
- Difficulty falling or staying asleep, problems concentrating or paying attention

**Reactions to trauma and loss reminders**
- Reactions to places, people, sights, sounds, smells, and feelings that are reminders of the traumatic event
- Reminders can bring on distressing mental images, thoughts, and emotional/physical reactions
- Common examples include: sudden loud noises, sirens, locations where the event occurred, seeing people with disabilities, funerals, anniversaries of the traumatic event, and television/radio news about the event

---

1 Traumatic Event, defined: “An event that has the power to overwhelm the normal coping abilities of an individual or group such as a disaster, violence, serious injury, or death.”
Positive changes in priorities, worldview, and expectations

- Enhanced appreciation that family and friends are precious and important
- Meeting the challenge of addressing difficulties (by taking positive action, changing the focus of thoughts, using humor, acceptance)
- Shifting expectations about what to expect from day to day and about what is considered a “good day”
- Shifting priorities to focus more on quality time with family or friends
- Increased commitment to self, family, friends, and spiritual/religious faith

When a loved one dies, common reactions include:

- Feeling confused, numb, disbelief, bewildered, or lost
- Feeling angry at the person who died or at people considered responsible for the death
- Strong physical reactions such as nausea, fatigue, shakiness, and muscle weakness
- Feeling guilty for still being alive
- Intense emotions such as extreme sadness, anger, or fear
- Increased risk for physical illness and injury
- Decreased productivity or difficulties making decisions
- Having thoughts about the person who died, even when you don’t want to
- Longing, missing, and wanting to search for the person who died
- Children and adolescents are particularly likely to worry that they or a parent might die
- Children and adolescents may become anxious when separated from caregivers or other loved ones

What helps

- Talking to another person for support or spending time with others
- Engaging in positive distracting activities (sports, hobbies, reading)
- Getting adequate rest and eating healthy meals
- Trying to maintain a normal schedule
- Scheduling pleasant activities
- Taking breaks
- Reminiscing about a loved one who has died
- Focusing on something practical that you can do right now to manage the situation better
- Using relaxation methods (breathing exercises, meditation, calming self-talk, soothing music)
- Participating in a support group
- Exercising in moderation
- Keeping a journal
- Seeking counseling

What doesn’t help

- Using alcohol or drugs to cope
- Working too much
- Extreme avoidance of thinking or talking about the event or death of a loved one
- Extreme withdrawal from family or friends
- Violence or conflict
- Not taking care of yourself
- Overeating or failing to eat
- Withdrawal from pleasant activities
- Doing risky things (driving recklessly, substance abuse, not taking adequate precautions)
- Excessive TV or computer games
- Blaming others

Summary

These feelings, thoughts, behaviors, physical reactions, and challenges to your spirit may come and go. For most people, these reactions usually are resolved in four to eight weeks, depending on the nature of the traumatic event. See the companion factsheets entitled, “Connecting with Others” and “Information for Families.”
Connecting with Others

Giving and Receiving Social Support

Seeking Social Support
Making contact with others can help reduce feelings of distress and help people recover in the aftermath of traumatic events.

Connections can be with family, friends, clergy, or others who are coping with the same traumatic event.

Children and adolescents can benefit from spending some time with other similar aged peers.

Social Support Options
- Spouse or partner
- Trusted family member
- Close friend
- Doctor or nurse
- Crisis counselor or other counselor
- Support group
- Co-worker, union representative
- Priest, Rabbi, or other clergy
- Pet

Do
- Decide carefully whom to talk to
- Decide ahead of time what you want to discuss
- Choose the right time
- Start by talking about practical things
- Let others know you need to talk or just to be with them
- Talk about painful thoughts and feelings when you are ready
- Ask others if it’s a good time to talk
- Tell others you appreciate them listening
- Tell others what you need or how they could help explain one main thing that would help you right now

Don’t
- Keep quiet because you don’t want to upset others
- Keep quiet because you’re worried about being a burden
- Assume that others don’t want to listen
- Wait until you’re so stressed or exhausted that you can’t fully benefit from help

Ways to Get Connected
- Calling friends or family on the phone
- Increasing contact with existing acquaintances and friends
- Renewing or beginning involvement in church, synagogue, or other religious group activities
- Getting involved with a support group or in community activities

Connecting with Others – Giving Social Support
You can help family members and friends cope with the disaster by spending time with them and listening carefully. Most people recover better when they feel connected to others who care about them. Some people choose not to talk about their experiences very much, and others may need to discuss their experiences. For some, talking about things that happened because of the disaster can help them seem less overwhelming. For others, just spending time with people one feels close to and accepted by, without having to talk, can feel best. The next page contains some information about giving social support to other people.

1 Traumatic Event, defined: “An event that has the power to overwhelm the normal coping abilities of an individual or group such as a disaster, violence, serious injury, or death”.

NIH National Institute of Environmental Health Sciences

DISASTER SUPERVISOR RESILIENCY TRAINING | Instructor Training Manual 67
Reasons Why People May Avoid Social Support

- Not knowing what they need
- Feeling embarrassed or weak
- Feeling they will lose control
- Not wanting to burden others
- Doubting it will be helpful, or that others won’t understand
- Having tried to get help and felt that it wasn’t there before
- Wanting to avoid thinking or feeling about the event
- Feeling that others will be disappointed or judgmental
- Not knowing where to get help

Good Things to Do When Giving Support

- Show interest, attention, and care
- Find an uninterrupted time and place to talk
- Be free of expectations or judgments
- Show respect for individuals’ reactions and ways of coping
- Acknowledge that this type of stress can take time to resolve
- Help brainstorm positive ways to deal with their reactions
- Talk about expectable reactions to disasters, and healthy coping
- Believe that the person is capable of recovery
- Offer to talk or spend time together as often as needed

Things that Interfere with Giving Support

- Rushing to tell someone that he/she will be okay or that they should “get over it”
- Discussing your own personal experiences without listening to the other person’s story
- Stopping the person from talking about what is bothering them
- Acting like someone is weak or exaggerating because he or she isn’t coping as well as you are
- Giving advice without listening to the person’s concerns or asking the person what works for him or her
- Telling them they were lucky it wasn’t worse

Summary

Connecting with others and giving and receiving social support are very beneficial actions that help people recover from traumatic events. See the companion factsheets entitled, “When Terrible Things Happen, What You May Experience—What Helps and What Doesn’t” and “Information for Families.”
When a Family Member is Traumatized at Work

When a family member is traumatized at work, it also affects other family members. Although your loved one who experienced the traumatic event\(^1\) may be experiencing normal reactions, their behavior may not seem normal to the family. It may take time to understand and cope with the event and family members can help. Two other factsheets in this series address 1) reactions to terrible events as well as coping strategies and 2) connecting with others, giving and receiving social support. Take a look at these factsheets.

Family members also may have strong reactions to the traumatic event such as fear, anger, sadness, protectiveness, or withdrawal. Whatever the reactions are, they are normal responses to a highly charged, abnormal traumatic event. This handout aims to provide some suggestions that may help family members help their loved one and themselves. The most important suggestions involve listening to feelings, not imposing a response or solution based on your feelings, and to remain emotionally present.

### Remember

- Stress responses can occur right away at the scene, or within hours, days, or even within weeks after the event.
- Your loved one may experience a variety of stress symptoms or may not feel any of them.
- Most people recover from traumatic events and feeling safe in the support of family, friends, and co-workers is important to that recovery.
- Reactions and symptoms usually subside and disappear in time; often, by four to six weeks, symptoms are gone or greatly diminished in the majority of people.
- If the signs of distress and the intensity of the reactions have not subsided within four weeks, or if they intensify, your loved one should consider seeking further assistance.
- For most people, if you don’t dwell on the symptoms and allow yourselves a chance to deal with the event, the suffering will lessen.
- Encourage, but do not pressure, your loved one to talk about what happened and their reactions to it. Talk is the best medicine. You can be most helpful if you listen and reassure.
- These events are usually upsetting to children. They will need to have some understanding of what happened; that mommy or daddy may be going through a difficult time, but that she or he will get better; and that they are safe and loved.
- If children are not coping well, child counselors or child psychologists can assist.
- Even if you don’t fully understand what your loved one is going through, you can still offer your love and support. Don’t be afraid to ask what you can do to help. Try not to be offended if they withdraw from the family or become overly protective of you or of children. These are normal reactions to trauma.
- Accept that life will go on. Maintain or return to a normal routine as soon as possible and maintain a healthy lifestyle. For children as well as adults, normal routines, especially for eating and sleeping, help us feel ourselves again.
- Be kind to yourselves.

See the companion factsheets entitled, “Connecting with Others” and “When Terrible Things Happen”.

---

\(^1\) Traumatic Event, defined: “An event that has the power to overwhelm the normal coping abilities of an individual or group such as a disaster, violence, serious injury, or death.”

Caring For Yourself

This factsheet covers the basics of self-care for disaster workers and volunteers including healthy sleeping, eating, exercise, and social interaction. The bottom line is to avoid radical changes to normal life patterns.

Sleep Deprivation is Hazardous?

Driving, operating heavy machinery or performing hazardous tasks while sleepy can be dangerous to you and your coworkers.

According to the National Institutes of Health’s, National Heart, Lung, and Blood Institute\(^1\), sleep deprivation occurs when you have one of the following:

- You don’t get enough sleep; 7 - 8 hours for adults.
- You sleep at the wrong time of day.
- You don’t sleep well or deeply.
- You have a sleep disorder.

Sleep deprivation is linked to many chronic diseases and depression. It is also linked to increased risk of injury. It is a common myth that people can learn to get by on little sleep with no negative effects. After losing 1-2 hours of sleep over a couple of nights, functioning suffers.

Signs and Symptoms

How sleepy you feel during the day can help you figure out whether you’re having symptoms of problem sleepiness. You might be sleep deficient if you often feel like you could doze off during normal activities.

Tips

It is common for disaster workers and volunteers to work long hours. To the extent that you have control over your schedule, it is very important to practice healthy sleeping habits:

- If your accommodations are noisy, earplugs may be helpful.
- Eye covers may help if the sleeping area has too much light.
- Limiting ‘screen time’ (electronic device use and TV’s) prior to sleep
- Avoid heavy meals, alcohol, tobacco or caffeine prior to bed.

Source: Centers for Disease Control
Are you eating well?

Disaster workers and volunteers are often confronted with unhealthy eating choices such as donuts, the bottomless coffee pot, pizza, or just a lack of access to nutritious alternatives. Consuming large amounts of sugar, fat, and other unhealthy food and snacks can increase stress on our minds and bodies. Importantly, energy and caffeinated drinks may provide a temporary boost, but the letdown is rapid and deep. These should be avoided if one is tired. The only thing that can cure sleep deficit is sleep.

The 2010 U.S. Dietary Guidelines for Americans describe a healthy diet as one that:

- Emphasizes fruits, vegetables, whole grains, and fat-free or low-fat milk and milk products.
- Includes lean meats, poultry, fish, beans, eggs, and nuts.
- Is low in saturated fats, trans fats, cholesterol, sodium (salt), and added sugars.
- Stays within your calorie needs.

Learn more about the Dietary Guidelines for Americans at: http://www.health.gov/dietaryguidelines.

Are You Getting Any Exercise?

Regular physical activity is one of the most important things you can do for your health. It is a very effective way of reducing stress and relaxing.

Fitting exercise into your schedule may be difficult, especially when you are doing exhausting disaster work. But even ten minutes at a time is fine. The key is to find the right exercise for you. It should be fun and should match your abilities. Brief walks are a great outlet for your mind and body.

Are You Interacting With Others?

Making contact with others can help reduce feelings of distress and help people recover in the aftermath of traumatic events. Connections can be with family, friends, clergy, or others who are coping with the same traumatic event. For more detail see the accompanying factsheet entitled, “Connecting with Others, Giving and Receiving Social Support”.
