Ebola Biosafety and Infectious Disease Awareness Level Knowledge Topics

- Awareness and site specific operational training
- Potentially Infectious Material
- Chemical Material
- Physical Environment (Safety Risk Management)
- Exposure Risk Assessment
- Means of Transmission
- Engineering Controls
- Administrative and Work Practice Controls
- Personal Protective Equipment
- Respiratory Protection
- Decontamination and Waste Management
- Hazard Communication
- Compliance with Guidelines, Standards, and Regulations
- Occupational Health- Post Exposure Protocols, Medical Surveillance, Vaccination, Respirator Clearance
- Emergency and Incident Response (Emergency Response and Exercise Drills)
Ebola Biosafety and Infectious Disease Response Training

Awareness Level Performance Objectives

Awareness and Site Specific Operational Training

- Explain the importance of awareness and site specific operational level training
- Describe goals and objectives of training
- List key training elements relevant to the worksite
- For operations, describe the importance of hands on drills with PPE, respirators, and decontamination

Infectious Material

- Describe the association of infectious agents to disease
- Describe the infectiousness of Ebola (or primary pathogen of concern)
- Describe means of transmission for Ebola virus disease (or primary pathogen of concern)
- Describe other common bloodborne, emerging, and/or seasonal infectious agents

Chemical Material

- Provide an example of engineering controls (e.g., chemical fume hood) needed when working with specific chemicals
- Explain correct storage location for each chemical
- Provide examples of administrative controls and work practices when working with specific chemicals
- Provide examples of personal protective equipment (PPE) needed when working with specific chemicals

Physical Environment (Safety Risk Management)

- Describe some physical safety hazards that are found in the workplace
- Explain how environmental conditions may be hazardous to performing tasks

Exposure Risk Assessment

- Explain the importance of conducting risk assessments in identifying potentially infectious material, chemical, and safety hazards
- List several methods that may be used to for hazard identification
- Describe the hierarchy of control measures
Means of Transmission

- Describe what is meant by contact, droplet, and airborne transmissions in infection control
- Describe the concept of risk categorization
- Describe the three routes of exposure

Engineering Controls

- Describe how isolation could be used to reduce exposure
- Describe how ventilation could be used to reduce exposure
- Describe site specific engineering controls to reduce exposure to specific infectious and chemical agents present at the workplace

Administrative Controls

- Describe the contents of an infectious disease exposure control plan
- Describe site specific examples of policy and procedures that your organization may have to prevent exposure to hazards
- Describe signage and communication systems in place to prevent exposure

Work Practice Controls

- Describe how the following reduce risk of exposure:
  - Housekeeping
  - Personal Hygiene Practices
  - Change areas
  - Showers
  - Washing facilities
  - Eating facilities

Personal Protective Equipment

- Describe appropriate selection of personal protective equipment (PPE) for use with potentially infectious materials.
- Describe limitations of PPE
- Give specific examples of PPE for protection against specific infectious and chemical agents
- Describe key elements of a written PPE program including:
  - Hazard assessment
  - Location of all required PPE
  - Identification of compromised PPE. Describe pre- and post-use inspection protocol for PPE
  - Demonstrate cleaning, disinfection, and disposal procedures for PPE Training
Respiratory Protection

- Describe selection of respiratory protection
- Explain the limitations of respiratory protection
- Review key elements of a respiratory protection program:
  - Written plan
  - Medical screening
  - Hazard assessment
  - Selection of respirators
  - Maintenance, cleaning, replacement, storage
  - Fit testing, seal checking, and training
- Describe an example of respirator use for a site specific infectious agent

Decontamination and Waste Management

- Describe proper disposal of different types of potentially infectious waste

Hazard Communications

- Explain the use of Safety Data Sheets (SDS) and other sources of information regarding chemicals and infectious agents in workplace
- State the hazard represented by the information on a chemical container’s label
- Look up properties of an infectious agent on the CDC website such as means of transmission, symptoms, incubation period.

Guidelines, Standards and Regulation Compliance, Safety Program Management

- Describe safety information resources such as OSHA, NIOSH, NIEHS, EPA, DOT, CDC, COSH groups, universities, etc.
- Explain application of OSHA standards for PPE, Respiratory Protection, Bloodborne Pathogens, and Hazard Communication
- Describe the use of OSHA’s general duty clause
- Identify location of required workplace manuals, plans, and procedures
- Assess employer’s preparedness plan based on potential hazards, protective measures, safety plan, existing workplace safety regulations, and exposure reporting mechanism

Occupational Health and Medical Surveillance

- Describe response procedure after suspected exposure.
- Demonstrate understanding of response protocols if exposure is suspected.
- Describe occupational health plan including:
  - Post exposure procedures, medical surveillance, vaccinations, and respiratory medical clearance
Emergencies and Incident Response

- Recognize significance of alarms
- Recall emergency response plan
- Describe emergency disinfection and exposure prevention procedures
- Describe procedures for responding to spills or potential exposures
- Describe emergency evacuation routes and assembly areas
